

ELEVATING TRUST IN MFM SYSTEM TO THE NEXT STAGE

PEACE OF MIND FOR KEY STAKEHOLDERS

MFM System Baseline Requirement for Custody

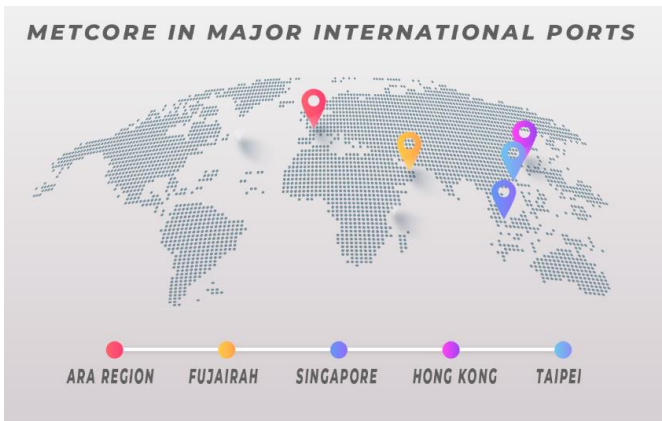

The MFM+ Program optimised by Metcore offers peace of mind for key stakeholders by ensuring bunker transactions are consistently accurate, transparent and secure for the extra edge over the competition.

The MFM+ Program provides continuous competency monitoring, which includes assessments for any impairment to the measurement accuracy from the MFM system or the crew during metering operations.

Qualification for the MFM+ Program includes complete measurement solutions provided by the expert team at Metcore to ensure conformity with applicable standards, implementation of pre-emptive measures against possible security breaches, and competency training for the crew to prevent negligence.

ABOUT METCORE

Metcore is specialised in the measurement and certification of bunker MFM system and an appointed Authorised Verifier with Enterprise Singapore.

Exclusively appointed by Lloyd's Register, Metcore has been conducting conformity assessment of MFM system in major ports of Asia, Europe and the Middle East.

At Metcore, we are your trusted partner providing complete measurement solutions. We strive to stay abreast of the latest development to support you in staying at the forefront of the bunkering industry.

Please contact us to discuss complete measurement solutions for your bunkering operations.

STAYING AHEAD OF THE COMPETITION

Managing the cost of bunker fuel has become a core strategic decision for most players in the shipping industry. A small variation in the quantity of bunker fuel delivery can quickly amount to millions of dollars of incremental fuel cost. Investing resources in ensuring measurement integrity in bunker transaction is the key to staying ahead of the competition.

The bunker industry has seen many positive developments since the implementation of Coriolis MFM system onboard bunker tankers to increase efficiency and transparency. The bunker buyers and crew onboard the receiving vessel trust the use of the MFM system.

Nevertheless, the MFM system must be assessed and validated periodically in order to prevent financial losses which may arise from inappropriate maintenance and incompetent handling during operations. The bunker fuel delivered in the MFM system must be able to withstand the scrutiny of the parties involved and the standards set by the authorities.

Under Metcore's MFM+ Program, our experts will ensure periodic and proper maintenance of the MFM system is conducted regularly to safeguard its measurement integrity within the acceptable limits prescribed under the relevant standards.

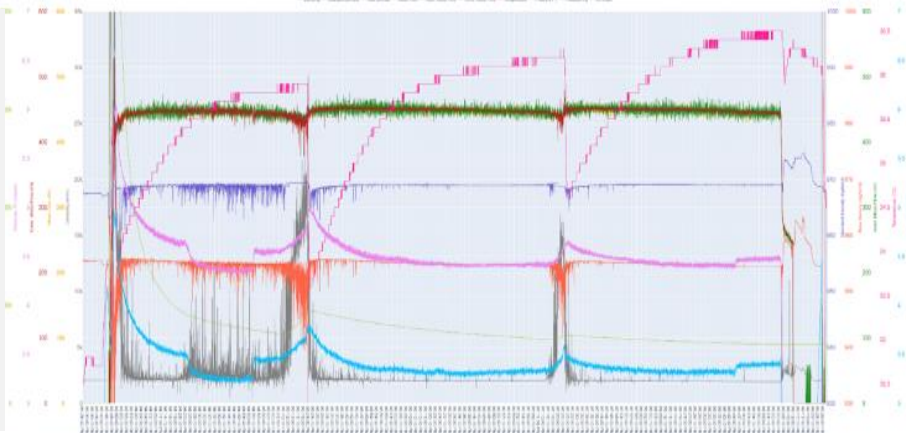

BENEFITS OF MFM+ PROGRAM

- ✓ Strengthen image with product differentiation.
- ✓ Improve monitoring & control of measurement operations.
- ✓ Receive regular updates of latest information and knowledge.
- ✓ Increase operations competency and consistency.
- ✓ Cost savings from better oil loss management.
- ✓ Periodic training of key operations personnel.
- ✓ Efficient handling and resolution of disputes.
- ✓ Captured data analytics set the solid foundation for digitalisation and blockchain technologies.
- ✓ Differentiate for sustainable competitive advantage.

MFM System Data Analytics REVEAL TRUE STORY

Correct interpretation of the data trail provides vital information for improved management control in bunkering operations.
